DESCRIPTION

The CCG range of annular/force washer load cells has been designed for the measurement of compressive forces and they are used in a wide range of research and industrial applications.

The CCG is often used in electro-mechanical test rigs and other critical bolted installations for monitoring continuously or periodically the tension profile of bolts during their use in the installation. The CCG is also used in cable tension systems and usually positioned at the cable anchor point.

The CCG, as with all other Applied Measurements sensors, can be supplied complete with monitoring/control electronics and calibrated as a system (please refer to the Instrumentation datasheets).

Note

The sensitivity range stated above is dependant on the selected mounting position. If the mounting position is maintained during operation, then the CCG will be repeatable and linear within the parameters specified above. If the mounting position is altered, then the sensitivity range may change by up to ± 10%, as may repeatability.
